Total number of holdings:	389

Fund Management: Paul Causer, Paul Read & Neil Woodford

Regional commentary

Both equity and corporate bond markets improved in July. Fixed interest markets welcomed the results of the European bank stress tests which showed that only seven of the 91 banks tested failed. All the major European banking names passed; those that did not were either already failed institutions or the weaker banks in Spain and Greece. Corporate bonds saw positive returns, with subordinated bank debt leading the way following the positive outcome of the stress tests. According to data from Merrill Lynch, sterling BBB rated spreads decreased by 23bps while sterling tier 1 bank spreads narrowed by 60bps and euro tier 1 by 228bps. High yield also saw healthy returns fuelled by a sharp rise in issuance. Elsewhere, Moody's reported that the European high-yield default rate fell from 6.8% in May to 5.8% in June and expects the default rate to continue to decline through the year. Equity markets were supported by a combination of positive earnings, a number of takeover offers and stronger than expected second quarter UK GDP data.

Fund strategy

In credit markets, we continue to favour higher yielding investment-grade bonds (BBB rated) and better quality high-yield issuers (BB and B rated). We believe that with many high-yield credits still offering double-digit yields and both markets and corporate issuers in a recovery phase, high-yield markets continue to offer opportunities. We also continue to see pockets of value in banks and other financials although we continue to avoid bank equities, apart from a small position in Lloyds received as part of a bond conversion. The fund's equity component remains focused on companies with sound balance sheets and strong cash flow generation, which support progressive dividend growth. In addition, many of these companies also have a large percentage of overseas earnings which limits their dependence on the UK economy.

Investment objective

The Invesco Perpetual Monthly Income Plus Fund aims to achieve a high level of income whilst seeking to maximise total return through investing in high yielding corporate and Government bonds, together with UK equities. In pursuing this objective, the fund managers may include investments that they consider appropriate which include transferable securities, money market instruments, warrants, collective investment schemes, deposits and other permitted investments and transactions as detailed in Appendix 2 of the most recent Full Prospectus.

ICVC Investment Series

The Monthly Income Plus Fund is a sub-fund of the Invesco Perpetual Fixed Interest Investment Series, which is a UK authorised investment company with variable capital (ICVC).

Performance profile ²								% growth	
	3 months	6 months	1 year	3 years	5 years	ACR	10 years	ACR

Important information

¹ All fund portfolio figures within this leaflet are as at 30 July 2010 (source: Invesco Perpetual). S&P Fund Rating as at 30 July 2010, Copyright© 2010 Standard & Poor's, a Division of The McGraw-Hill Companies, Inc. All rights reserved.

² Performance figures are shown in sterling on a mid-to-mid basis, inclusive of net reinvested income and net of the annual management charge and all other fund expenses to 30 July 2010. The figures do not reflect the initial (sales) charge paid by individual investors. Graph figures are as at the end of the relevant month unless otherwise stated. Standardised past performance figures are as at 30 June 2010. (Source: Lipper)

³ The yields shown are expressed as % per annum of current NAV of the fund. They are estimates for the next 12 months, assuming that the fund's portfolio remains unchanged and there are no defaults or deferrals of coupon payments or capital repayments. They are not guaranteed. They do not reflect the initial (sales) charge of the fund. Investors may be subject to tax on distributions. Cash income is estimated coupons from bonds and, where applicable, estimated dividends from equities.

Important information

The running yield estimates expected cash income into the fund from coupons of current bond holdings and, where applicable, dividends from current equity holdings. The running yield for this fund is net of all fund charges except AMC, which is charged to capital. The redemption yield estimates the annualised total return: in addition to expected cash income, it includes the amortised annual value of unrealised capital gains/losses of current bond holdings, calculated with reference to their current market price and expected redemption value. The redemption yield is net of all fund charges. The distribution yield estimates the cash distribution to the shareholders: in addition to expected cash income, it includes the amortised annual value of unrealised capital gains/losses of current bond holdings, calculated with reference to their historic purchase price and expected redemption value (known as 'effective yield from purchase price' method). The distribution yield for this fund is net of all fund charges except AMC, which is charged to capital. The underlying yield is calculated in the same way as the distribution yield, but is always net of all charges. The underlying yield for this fund is, therefore, lower than the distribution yield by the amount of the AMC. Where, in the Manager's judgement, there is significant uncertainty that a bond holding will be redeemed at par, the amortised capital component for that holding is retained in the fund's capital and not distributed. This has the effect of reducing the estimated redemption, distribution and underlying yields and the actual distribution rate.

The value of investments and any income will fluctuate (this may partly be the result of exchange rate fluctuations) and investors may not get back the full amount invested. Past performance is not a guide to future returns. The fund invests in bonds and other fixed income securities that are subject to the risk that issuers do not make payments on such securities. The fund may be adversely affected by a decrease in market liquidity which may impair the fund's ability to acquire or to dispose of securities at their intrinsic value. The fund may invest in high-yield bonds which are regarded as being more speculative (than investment-grade bonds) as to the issuer's ability to make payments of principal and interest. Where Invesco Perpetual has expressed views and opinions, these may change.
